On December 16, 2010, SEBI issued a show cause notice ("SCN") to RIL and 12 other entities (together, the "Noticees") in connection with the trades by RIL in the stock exchanges in 2007 in the shares of Reliance Petroleum Limited, then a subsidiary of RIL. Hearings were held before the Whole Time Member ("WTM") of SEBI in respect of SCN. By an order dated March 24, 2017, the WTM of SEBI held that the actions of RIL and other 12 noticees constituted a violation of the provisions of section 12A of Securities and Exchange Board of India Act, 1992 read with regulations 3, 4(1) and 4(2)(e) of the SEBI (Prohibition of Fraudulent and Unfair Trade Practices relating to Securities Market) Regulations, 2003 and the other 12 noticees violated provisions of the SEBI circular No. SMDRP/DC/CIR-10/01 dated November 2, 2001 and NSE circular No. NSE/CMPT/2982 dated November 7, 2001. WTM passed the directions: (i) prohibiting the Noticees from dealing in equity derivatives in the 'Futures & Options' segment of stock exchanges, directly or indirectly, for a period of one year from the date of the order; and; (ii) to RIL to disgorge an amount of Rs. 447.27 crore along with interest at the rate of 12% per annum from November 29, 2007 till the date of payment. In May 2017, RIL and the other noticees filed an appeal before the Securities Appellate Tribunal ("SAT") against this order. SAT, by a majority order (2:1), dismissed the appeal on November 5, 2020 and directed RIL to pay the disgorged amount within sixty days from the date of the order. The appeal of RIL and other noticees has been admitted by the Hon'ble Supreme Court of India. By its order dated December 17, 2020, the Hon'ble Supreme Court of India has directed RIL to deposit Rs. 250 crore in the Investors' Protection Fund, subject to the final result of the appeal and has stayed the recovery of the balance, inclusive of interest, pending the appeal. RIL has complied with the order dated December 17, 2020 of the Hon'ble Supreme Court of India.

In the very same matter, on November 21, 2017, SEBI issued show cause notice, *inter alia*, to RIL and Shri Mukesh D. Ambani in his capacity as Managing Director of RIL, asking them to show cause as to why inquiry should not be held in terms of SEBI (Procedure for Holding Inquiry and Imposing Penalties by Adjudicating Officer) Rules, 1995 and penalty not be imposed under the provisions of the Securities and Exchange Board of India Act, 1992. The Adjudicating Officer of SEBI passed an order on January 1, 2021 imposing a penalty of Rs. 25 crore on RIL and Rs. 15 crore on Shri Mukesh D. Ambani.

#### APPROACH - BASIS OF AMALGAMATION

The Schome contemplates the Proposed Amalgamation under Sections 230 to 232 of the Companies Act, 2013 and other relevant provisions of the Companies Act, 2013 and rules issued thereunder to the extent applicable.

Arriving at the Equity Share Exchange Ratio for the purposes of an omalignmention much an the Proposed Amalignmenton, would require determining the relative values of each company involved and of their shares. These values are to be determined independently but on a relative basis, and without considering the effect of the merger.

The three main valuation approaches are the market approach, Income approach and easet approach. There are several commonly used and accepted methods within the market approach, income approach and used approach, for determining the relative fair value of equity phases of a company, which can be considered in the present valuation exercise, to the extent relevant and applicable, to arrive at the Equity Shara Exchange Ratio for the purpose of the Proposed Amalogmation, such ea.

- 2 Income Approach Discounsed Cash Flow (DDF) Method
- 3 Market Approach
  - Market Price Method
  - · Comparable Companies Multiples (CCM) Method
  - Comparable Transactions Muniples (CTM) Murhod

I should be understood that the valuation of any company or its assets is inherently subjective and is subject to uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will floctuate with changes in prevailing market conditions, the conditions and prospects, financial and otherwise, of the companies businesses, and other factors which generally influence the valuation of companies and then assets.

The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too alroady emphasized that a valuar can only arrive at one value for one purpose. Our choice of method of valuation has been arrived at using usual and conventional methods adopted for transactions of a similar nature and our responsible judgment, in an independent and bone lide manner based on our provious experience of assignments of a nimilar nature.

#### Asset Approach - Not Asset Value Method

Under the asset approach, the not asset value method is considered, which is tunied on the underlying not assets and behildes of the company, taking into account operating assets and liabilities on a book value backs and appropriate adjustments for, interalia, value of surplus/ non-operating assets.

Income Appreach: Income approach in a valuation approach that converts maintainable or future amounts (e.g., cash flows or income and expenses) to a single current (i.e., discounted or capitalised) amount. The value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

- Discounted Cash Flow (DCF) Method: Under this method, either:
  - If the projected free cash flows from business operations available to all providers of capital are discounted at the weighted average cost of capital to such capital providers, on a market participant basis, and the sum of such discounted free sash flows is the value of the basiness from which value of debt and other capital is deducted, and other relevant adjustments made to arrive at the value of the equity Free Cash Flows to Firm (FCFF) technique; This discount rate, which is applied to the free cash flows, should reflect the opportunity cour to all the capital providers intensity chambraiders and creditors), weighted by their relative contribution to the total capital of the company. The opportunity cost to the capital provider equits the rate of intern the capital provider expects to campon on other investments of equivalent risk of

Free Cash Flows to Equity (FCE) technique. This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to the equity capital providers. The opportunity cost to the equity capital provider expects to sam on other investments of equivalent risk.

Market Approach: Market approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets liabilities or a group of assets and liabilities, such as a business.

• Market Price Method: Under this method, the value of shares of a dompany is determined by taking the average of the market capitalization of the upday shares of such company as quoted on a recognised stock exchange over reasonable periods of time where such quotations are arising from the shares being regularly and freely traded in an active market, subject to the element of speculative support that may be intuit in the market price. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, especially others the market values are fluctuating in a volable capital market. Further, in the case of an amalgement on, where there is a question of evaluating the chares of one company against those of another, the volume of transactions and the number of shares available for trading on the clock exchange over a reasonable period would have to be of a comparable standard. This method would also cover any other transactions in the shares of the company including primary preferential saces open offer in the shares of the company including primary preferential.

- Comparable Companies Multiples ICCMI Method: Under this method, one attempts to measure the value of the theres/ business of company by applying the derived market multiple based on market quantitions of comparable public/ listed companies, in an active market, possessing attributes similar to the business of such company to the relevant frepocial parameter of the company business (based on past and) or projected working results) effect making adjustments to the derived multiples on account of dissimilarities with the comparable companies and the arranging, weeknesses and other factors peculiar to the company being valued. These valuations are based on the principle that such market valuations toking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Palevant multiples need to be chosen carefully and adjusted to differences between the circumstances.
- Comparable Transactions Multiples (CTM) Method: Under this method, one attempts to

#### HASIS OF EQUITY SHARE EXCHANGE RATIO

The passes of the Proposed Amalgamation would have to be determined after taking into consideration all the factors, approaches and methods considered appropriate by the Valuers. Though different values have been as read at under each of the above approaches methods for the purposes of recommending the Equity Share Exchange Natio it is secessory to prove at a single value for the shares of the companies involved in an amalgamation such as the Proposed Amalgamation, it is however important to note that in doing us, we are not attempting to arrive at the absolute values of the shares of the companies but at their relative values to facilitate the intermination of an Equity Share Exchange Rubo For this purpose, it is necessary to give appropriate weights to the values arrived at under each approach/method.

In the ultimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuar and judgments taking into account all the research factors. There will always be several factors, e.g. quality of the management, present and prospective competition, yield on comparable securities and market sentiment, etc. which are not evident from the face of the balance sheet but which will strongly influence the worth of a scare.

The determination of an examinge ratio is not a precise science and the conclusions serived at in many cases will, of necessity, be subjective and dependent on the assertise of individual judgment. This concept is also recognized in judicual decisions. There is, therefore, no indisputable single exchange ratio. While we have provided our recommendation of the Equity Share Exchange Platic based on the information available to us and within the acops and constraints of our engagement, others may have a different opinion as to the Equity Share Exchange Ratio of the equity shares of FEL and the respective Part A Companies. The final responsibility for the determination of the exchange ratio or which the Proposed Amalgamation shall take place will be with the Bosid of Directors of the respective Part A Companies who should take into account other factors such as their own assessment of the Proposed Amalgamation and input of other advisors.

## Asset Approach - Net Asset Value Method

Under the asset approach, the net asset value method is considered, which is used on the underlying net assets and liabilities of the company, taking into account operating essets and liabilities on a book value basis and appropriate acquainments for, interallal value of surplus/ non-operating assets.

Income Approacht income approach is a valuation approach that converts maintainable or future amounts (e.g., cash flows or income and expenses) to a single current (i.e., discounted or capitalised) amount. The value indicated by numeric market expectations about those future amounts.

- Discounted Cash Flow (DCF) Method: Under this mathod, either:
  - the projected free cash flows from business operations available to all providers of capital are discounted at the weighted everage cost of capital to such capital providers, on a number participant basis, and the sum of such discounted from cash flows in the value of the business from which value of debt and other capital is deducted, and other relevant adjustments made to strive at the value of the equity Free Cash Flows to Firm (FCFF) technique. This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to all the capital providers (namely shureholders and craditors), weighted by their relative contribution to the total capital of the company. The opportunity cost to the capital provider equals the rate of return the capital provider expects to same or other pressuments of equivalent risk; or
  - the projected from contribute from business operations available to equity shareholders (after deducting each flows attributable to the debt and other capital providers) are discounted at the cost of equity, on a market participant basis, and the norm of such discounted free cash flows, after making other relevant adjustments, is the value of the equity. Free Cost Flows to Equity (FCFE) technique. This discount rate, which is implies to the free cash flows, should reflect the opportunity cost to the equity capital providers. The apportunity cost to the equity capital provider expects to earn on other investments of equivalent risk.

Market Approach: Markin approach is a valuation approach that uses prices and other relevant information generaled by market transactions involving identical or composited it is, similarly assets habilities or a group of assets and liabilities, such as a business:

• Market Price Method. Under this method, the value of stages of a company is determined by taking the average of the market capitalisation of the equity shares of such company as quoted on a recognised stock exchange over reasonable periods of time where turn quotations are energy from the shares being regularly and freely traded in an active market, subject to the element of speculative support that may be intuiting in the market pade. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, especially where the murbal values are fluctuating in a volatile capital market. Further, in the case of an amalgamistion, where there is a quotion of evaluating the shares of one company against those of enother, the volume of trainactions and the number of shares available for rading on the stock archange over a reasonable period would have to be of a companyly including attendary preferential issued open offer in the shares of the company evaluable in the public domain.

- Comparable Companies Multiples (CCM) Method: Under this method, one attempts to measure the value of the shower business of company by applying the derived morker multiple board on manual quotations of comparable public listed companies, in an active market, possessing attributes similar to the huminess of such company. To the relevant financial parameter of the company business (based on past and/ or projected working results) after making adjustments to the derived multiples on account of desimilarities with the company being valued. These valuations are based on the principle that such market valuations, taking place between informed buyers and informed sellers, incorporate all foctors relevant to valuation. Enlevant multiples need to be chosen carefully and adjusted for differences between the circumstances.
- Comparable Transactions Multiples (CTM) Method: Under this method, one attempts to measure the value of the charact business of company by applying the market multiples of publicly disclosed transactions in similar space on the respective companies being evaluated. Helevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

Out of the above methods, we have used approaches/ methods as considered appropriate. The valuation approaches/ methods used, and the values arrived at using such approaches/ methods by us neve been tabled in the next section of this Report.

## BASIS OF EQUITY SHARE EXCHANGE RATIO

The basis of the Proposed Amalgamation would have to be determined after using into consideration all the lactors, approaches and methods considered appropriate by the Valueta Chaugh different values have been errived at under each of the above approaches/methods, for the purposes of recommending the Coulty Share Eachange Hatio it is necessary to errive at a single value for the shares of the companies involved in an emergement on such as the Proposed Amalgamation. It is however important to note that in decay so, we are not attempting to arrive at the absolute values of the shares of the companies but at their relative values to facilitate the determination of an Equity Share Exchange Batio. For this purpose, it is necessary to give appropriate weights to the values arrived at under mach approach/method.

In the ultimate analysis, valuation will have to be arrived at by the silencial of judicious discrition by the valuer and judgments taking into account all the relevant factors. There will always be several factors, e.g. quality of the management, present and prospective competition, yield on comparable securities and market sentiment, and which are not evident from the face of the balance sheet but which will strongly influence the worth of a shate.

The desermination of an exchange ratio is not a precise accence and the conclusions arrived at in many cases will, of nucleasity, be subjective and dependent on the express of individual audigment. This context is also recognized in judicial decisions. There is, therefore, no indisputable single exchange ratio. While we have provided our recommendation of the Equity Share Exchange Ratio based on the information available to us and within the scope and constraints of our organization, others may have a different opinion as to the Equity Share Exchange Ratio of the equity shares of FEL and the respective Part A Companies. The final responsibility for the determination of the exchange ratio at which the Proposed Americansular shall take place will be with the Board of Directors of the respective Part A Companies who should take into account other factors such as their Dwn assessment of the Proposed Americans and input of other rations.

## Valuer's Notes

For the present valuation enarysis, we have considered it appropriate to apply the income Approach and the Market Approach (Warnet Price and CCM), to arrive at the relative fair value of the equity shares of the companion for the purpose of the Proposed Amelganistics.

In the purpose analysis, the amalgumation of the completion is presented with an the saturable that the companies would merge as going concerns (subject to the implementation of the composite solaries of merger) and an other realization of the operating assets is not contemplated. The operating assets bave therefore been considered at their book and non-operating/surplus assets, it any at their fair values under the Asset Approach in such a going concern scenario, this relative earning power, we reflected under the linearies and Market approaches, a of greater importance to the basis of emalgamation/ merger, with the values arrived at on the net asset being of limited relevance. Hence, the Asset Approach has not been considered in enviring as the Equity Share examining Harro.

## APPROACH - BASIS OF AMALGAMATION

The Scheme contemplates the Proposed Amargametion under Sections 220 to 232 of the Cumpanies Ass, 2013 and other relevant provisions of the Companies Act. 2013 and rules issued the sunder to the extent applicable.

Arriving at the Equity Share Exchange Ratio for the purposes of an amalgamatics such as the Proposed Arraigamation, would require determining the inturive values of each company trivolved and of their shares. These values are to be determined independently but on a relative basis, and without considering the effect of the merger.

The three main valuation approaches are the mortal approach, income approach and asset approach. Them are neveral community used and accepted methods within the market approach, income approach and made approach, for determining the relative following of equity shares of a company, which can be considered in the present valuation exercise, to the extent calculate applicable, to arrive at the Equity Share Exchange Ratio for the purpose of the Proposett Ameliganisation, such as:

- 1. Asset Approach. Net Asset Vide (NAV) Method.
- 2. Innone Approach Disposited Cash Flow (DCF) Method
- 3. Market Approach
  - Winnker Price Method
  - Eamparable Companies Multiples (CCM) Method.
  - Computable Transactions Multiples (CTM) Method

and is subject to undertainties and comingentics, all of which are difficult to public and are beyond for control, in performing our enables, we made assumptions with respect to inclustry performance and general husiness and economic conditions, many of which are beyond the control of the companies, in addition, this valuation will fluctuate with changes in prevailing market conditions, the conditions and proposes, firament and concerns of the companies businesses, and other factors which cenerally influence the valuation of companies and their assets.

The application of any particular method of velocition depends on the purpose for which the valuation is done. Although different values may exist for different purposes. It cannot be too strongly empressed that a valuer can only arrive at one value for one purposes. ## Asset Approach - Net Asset Vehin Method

Under the asset approach, the net asset value mother in considered, which is based on the underlying net assets and liabilities of the company, taking into account operating assets and liabilities on a book value have and appropriate adjustments for, interalls, value of surplus/ non-operating assets.

Income Approach: Income approach is a valuation approach that converts maintaintable or future amounts leight east flows or impose and expension) to a single current (i.e., discounted or capitalised) amount. The value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

- Discounted Cash Flow (DCF) Method: Under this method, either:
  - the projected free cash flows from business operations evailable to all providers of capital and discounted at the Weighted average cost of capital to such capital providers, on a market participant beals, and the sam of such discounted free cash flows in the value of the business from which value of debt and other capital is deducted, and other relevant adjustments made to arrive at the value of the equity. Fine Cash Flows to Firm (FCFF) technique, This discount rate, which is applied to the free cash flows, should reflect the appointmity cont to all the capital providers (namely shareholders and crollings), weighted by their relative contribution to the total capital of the company. The appointmity cost to the capital provider equals the rate of return the capital provider expects to common or other investments of equivalent risk, or
  - In the projected has each flows from business operations available to equity shareholders lafter deducting cash flows attributable to the debt and other capital providers) are discounted at the cost of equity, on a market participant basis, and the sum of such discounted from cash flows, after making other relevant adjustments, is the value of the equity. First Cash Flows to Equity (FCFE) technique. This discount raid, which is applied to the free cash flows, should reflect the opportunity cost to the equity capital provider equals the rate of return such equity capital provider equals the rate of return such equity capital provider equity capital provider excepts to earn on other investments of equivalent risk.

Market Approach: Market approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable 6.6, similar) assets, liabilities are a group of assets and liabilities, such as a basiness.

• Market Price Method: Under this method, the value of shares of a company is determined by taking the average of the market capitalisation of the equity shares of such company an quoted on a recognised atook exchange over reasonable periods of time where such quotations are writing from the charm being regularly and fructy traded in an active market, subject to the element of speculative support that may be inbuilt in the market price. But there could be structures where me value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, especially where the market values are fluctuating in a volable capital market. Further, in the case of an emalgement in, where there is a question of explaning the shares of one company against thinse of another, the volume of transactions and the number of shares available for trading on the stock exchange over a reasonable period would make the element of the company including primary/preforential issues open offer in the shares of the company including primary/preforential issues open offer in the shares of the company available in the public domain.

## BASIS OF EQUITY SHARE EXCHANGE RATIO

The basis of the Proposed Amalgamatico would have to be determined after usking into consideration all the factors, soproaches and methods considered appropriate by the Valuers. Though different values have been arrived at under each of the above approaches methods, for the purposes of recommending the Equity Share Exchange Ratio it is necessary to arrive at a unight value for the shares of the companies involved in an amalgamation such as the Proposed Amalgamation. It is however important to note that in doing so, we are not attempting to arrive at the absolute values of the shares of the companies but at their relative values to focilitate the determination of an Equity Share Exchange Patio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each approach memoria.

In the altimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuar and judgments taking into account all the relevant factors. There will always be several factors, e.g. quality of the management, present and prospective competition, vield on comparable securities and manual sentement, e.e. which are not evident from the face of the balance sheet but which will strongly influence the worth of eighter.

The determination of an exchange ratio is not a precise science and the conductions convex in in many cases will, of necessity, be subjective and dependent on the exercise of individual judgment. This concept is also recognized in judicial decisions. There is, therefore, no indisputable angle exchange ratio. While we have provided our recommendation of the Equity Share Exchange Ratio based on the information available to up and within the scope and constraints of our engagement, others may have a different opinion as to me Equity Share Exchange Ratio of the equity shares of FEL and the respective Part A Companies. The final responsibility for the determination of the exchange ratio at which the Proposed Ameligemation and into account other factors such as their two assumment of the Proposed Ameligemation and input of other advisors.

#### Note:

### Valuar's Notes:

For the present valuation analysis, we have considered it appropriate to apply the Income Approach and the Market Approach (Market Price and CCM), to order at the relative fair value of the equity states of the companies for the purpose of the Proposed Amalgametics.

In the surrent analysis, the amalgament of the companies is proceeded with on the assumption that the companies would marge us going concerns laubject to the implementation of the composite scheme of merger) and an actual realization of the operating assets is not contemplated. The operating assets have timeline been considered at their book and non-operating/surplus assets, if any at their fair values under the Asset Approach. In such a going concern operation, the relative earning power, as reflected under the Income and Market approaches, is of greater expertance to be tracks of amalgament on merger, with the values arrived at on the net asset beam being of limited relovance. Hence, the Asset Approach the not been considered in arriving at the Equity Share Exchange Ratio.

## APPROACH - BASIS OF AMALGAMATION

The Schome contemplates the Proposed Amalgamation under Sections 230 to 252 of the Companies Act, 2013 and other relevant provinces of the Companies Act, 2013 and rules assess thereunder to the examt applicable.

Arriving at the Equity Share Exchange Satio for the purposes of an amargametion such as the Proposed Amargamentary, would require determining the relative values of each enterpory involved and of their states. These values are to be determined independently but on a relative basis, and without considering the effect of the marger.

The three main valuation approaches are the market approach, income approach and asset approach. There are several community used and accepted methods within the market approach, income approach and asset approach, for determining the relative fair value of equity shares of a company, which can be considered in the present valuation exempte, to the extern relevant and applicable, to arrive at the Equity Share Exchange Flate for the purpose of the Proposed Amelgametion, such as:

- 1 Asset Approach Not Asset Value (NAV) Mathod
- 2. Income Approach Discourred Cash Flow (CCT) Mathed:
- 3. Market Appreach
  - Market Price Method
  - Comparable Companies Multiples (CCM) Method.
  - Crimparatile Transactions Multiplies (CTM) Method

It should be understood that the valuation of any company or its assets is inherently subjective and is subject to uncertainties and contingencies, all of which are difficult to uneded and are beyond our control to performing our analytic, we made assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the currint of the companies in addition, this valuation will fluctuate with changes in providing market conditions, the conditions and prespects, financial and otherwise, of the companies businesses, and other factors which generally influence the valuation of companies and their exists.

The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes. It cannot be too strongly emphasized that a value can only arrive at one value for one purpose. Our office of method of valuation has been prevent at using usual and conventional methods adopted for transactions of a similar value and our ressociable judgment, in an independent and bone fide manner based on our previous experience of assignments of a similar nature.

### Asset Approach - Net Asset Value Michael

Under the asset approach, the net asset value method is considered, which is based on the underlying not assets and liabilities of the company, taking into account operating assets and liabilities on a book value basis and appropriate adjustments for, interalis, value of surplus/non-operating assets.

Income Approach: Income approach is a valuation approach that converts maintainable or future amounts (e.g., cash flows or income and expenses) to a single current (i.e., discounted or trapitalised) amount. The value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

- Discounted Cash Flow (DCF) Method: Under this method, either:
  - are discounted at the weighted sverage cost of capital to such capital providers of capital are discounted at the weighted sverage cost of capital to such capital providers, on a market participant basis, and the sum of such discounted fron cash flows is the value of the business from which value of debt and other capital is deducted, and other relevant adjustments made to arrive at the value of the equity Free Cash Flows to Firm (FCFF) technique; This discount rate, which is applied to the free cosh flows; should reflect the apportunity cost to all the capital providers (namely shareholders and creditors), weighted by their relative contribution in the total capital of the company. The apportunity cost to the capital provider equals the rate of return the capital provider expects to earn on other investments of equavalent risk; or
  - the projected free cash flows attributable to the door and other capital providers) are discounted at the cost of equity, on a market participant besis, and the sum of such discounted free cash flows, after making other relevant adjustments, is the value of the equity. Free Cash flows, after making other relevant adjustments, is the value of the equity. Free Cash flows to Equity (FCFE) technique. This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to the equity capital providers. The opportunity dost to the equity capital provider equals the rate of return such equity capital provider repeats to carn on other investments of equivalent risk.

Market Approach: Market approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets, liabilities or a group of essets and liabilities, such as a business.

• Market Price Method: Under this method, the value of shares of a company is determined by taking the average of the market capitalisation of the equity shares of such company as quoted on a recognised stock exchange over reasonable periods of time where such quotations are ensing from the shares being regularly and freely traded in an active market, subject in the element of appointain support that may be inbuilt in the market price. But there could be attestions where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, aspecially where the market values are fluctuating in a volatile capital market. Further, in the case of an amalgamation, where there is a question of evaluating the shares of one company against those of another, the volume of transactions and the number of shares evailable for trading on the stock exchange over a reasonable period would have to be of a company including primary/ preferential issues/ open offer in the shares of the company including primary/ preferential issues/ open offer in the shares of the company available in the public domain.

BURG

- Comparable Companies Multiples (CCM) Method: Under this method, one attempts to measure the value of the shares' business of company by applying the derived market multiple based on market quotations of comparable public/ fixed companies, in an active market, prospecting attributes similar to the business of such company to the relevant ficancial perameter of the company/ business (based on paul and/ or projected working results) after making adjustments to the derived multiples on account of dissimilarities with the companies companies and the strongths, weaknesses and other factors becomes to the company being valued. These valuations are based on the principle that much market valuations, taking place between informed buyers and informed safers, incorporate oil factors relevant to valuation. Policizent multiples need to be chosen carefully and adjusted for differences between the organisances.
- Comparable Transactions Multiples (CTM) Method: Under this method, one attempts to
  measure the value of the shares/ business of company by applying the market multiples of
  publicly disclosed transactions in similar space as the respective companies being evaluated.
  Relevent multiples used to be chosen carefully and adjusted for differences between the
  circumstances.

Out of the above methods, we have used approaches/ methods as considered appropriate. The valuation approaches/ methods used, and the values arrived at using such approaches/ methods by us have been sabled in the next section of this Report.

#### BASIS OF EQUITY SHARE EXCHANGE RATIO

The basis of the Proposed Amalgamation would have to be determined after taking immiconsideration all the factors, approaches and methods considered appropriate by the Valuers. Though different values have been arrived at under each of the above approximately methods, for the purposes of recommending the Equity Share Exchange Ratio it is necessary to arrive at a single value for the shares of the companies involved in an amalgamation such as the Proposed Amalgamation. It is however important to note that in doing so, we are not attempting to arrive at the absolute values of the shares of the companies but at their relative values to facilitate the determination of an Equity Share Exchange Ratio. For this purpose, it is accussary to give appropriate weights to the values strived at under each approach, method:

In the ultimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuer and judgments taking into account all the relevant factors. There will always be asymptotom, e.g. quality of the management, present and prospective competition, yield on comparable accurities and market sentiment, etc. which are not evident from the face of the balance street but which will strongly influence the worth of a share.

The determination of an exchange ratio is not a precise science and the conclusions errived at in many cases will, of necessity, he subjective and dependent on the exercise of individual judgment. This concept is also recognized in judicial decisions. There is, therefore, no indisputable single exchange ratio. While we have provided our recommendation of the Equity Share Exchange Ratio based on the information available to us and within the scope and curatraints of our engagement, others may have a different opinion as to the Equity Share Exchange Ratio of the equity shares of FEL and the respective Part A Companies. The final responsibility for the determination of the exchange ratio at which the Proposed Amalgamation shall take place will be with the Board of Directors of the respective Part A Companies who should take into account other factors such as their own assessment of the Proposed Amalgamation and input of other advisors:

## Valuer's Notes:

For the present valuetion analysis, we have considered it appropriate to apply the forcine Approach and the Worker Approach (Morse) Price and CCM), to arrive at the relation for value of the equity change of the companion for the outpose of the Proposed Amelgamother.

In the current analysis, the setal parasition of the contourned is proceeded with on the essemblian that the companies would marge as noing contourned is object to the implementation of the composite scheme of merger) and an actual realization of the operating assets is not contemplated. The operating assets have therefore both considered at their book and non-operating surplus assets, if my at their fer values under the Asset Approach. In such a going contein scenario, the relative earning power, as reflected under the frictions and Market approaches, is of greater importance to the basis of amorphisation marger, with the values arrived at on the relative basis being of limited relevance. Hence, the Asset Approach has not been countered in criticing at the English Strate Explange flows.

Given the hature of the businesses of the companies and the fact that we have been provided by the Port A Companies with their projected financials, we have considered it appropriate to apply the DCF Method under the income Approach to private the relative fair value of the shares of the Path A Companies for the purpose of arriving at the Equity Share Exchange Ratio.

In the present case, the equity there is both the companies. FEL and FCL, are listed on BSE and NSE. Please dute that for Market Price Mathod, we have considered market price movement of 10 June 2620 given that there has been again from movement in share price for Part A Companies on account of market speculations of this transaction post this date. We have also applied the CCM Mathod under the Market Approach to arrive at the relative fair value of the shares for the purpose of entiring at the Equity Share Exchange Ratio.

Similarly, in the absence of any comparable transactions similar to the companies helogsvalueted as a part of the Report, the Market Approach (CTM) has not been considered in sroving at the Equity Share Exchange Ratio.

#### Ratio:

In light of the atiovo, and on a consideration of all the relevant factors and circumstances as discussed and outlined herein above, we recommend the following Equity Share Eschange Ratio for the Proposed Amalgamation:

101 (One hundred and one only) equity drare of FEL of INR 26 each fully paid up for every 10 (Tea only) equity shares of FRC of INR 22 each fully paid up.

#### APPROACH - BASIS OF AMALGAMATION

The Scheme contemplates the Proposed Amelgemetics under Sections 230 to 222 of the Conquences Act, 2013 and other relevant provisions of the Companies Act, 2013 and rules assess the counter to the extern applicable.

Arriving at the Equity Share Exchange Ratio for the purposes of an amalgamation such as the Proposed Amalgamation, would require determining the relative values of each company involved and of their shares. These values are to be determined independently but on a relative basis, and without considering the effect of the morgen.

The three main valuation approaches are the market approach, income approach and asset approach. There are several dominantly used and accepted methods within the market approach, income approach and asset approach, for determining the relative fair value of equity shares of a company, which can be considered in the present valuation exercise to the extent relevant and applicable, to prove at the Equity Share Exchange flurio for the purpose of the Proposed Amalgametion, such as:

- 1. Asser Approach Net Asset Value (NAV) Method
- 2. Income Approach Discounted Cash Flow (DCT) Memod
- 8. Market Approach
  - Market Print Murrorl
  - Comparable Companies Wultiples (CCM) Method
  - Comparable Transactions Multiples (CTM) Method

It should be inderstood that the valuation of any company or its assets is inherently subjective and is subject to uncontributes and continguouss; all of which are difficult to predict and are beyond our control. In performing our analysis, we made assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market acciditions, the conditions and prospens, financial and otherwise, of the companies oursinesses, and other factors which generally influence the valuation of companies and their agrees.

The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it dennot be too strongly emphasized that a valuer can only arrive at one-value for one purpose. Our displace of murhoid of valuation has been prevent at using agual and conventional methods adopted for transactions of a similar nature and our reasonable judgment, in an independent and bone fide manner based on our previous experience of saughments of a similar nature.

### Asset Approach - Net Asset Value Method

Under the asset appropriate, the net passe value method is considered, which is based on the uncledying det assets and liabilities of the company, taking into account operating assets and fabilities on a book value basis and appropriate adjustments for, intermits, within of surplusy non-operating assets.

Income Approach: Income approach is a valuation approach that acovers maintainable or future amounts (e.g., cash flows or income and expenses) to a single current (i.e., dissounted or capitalised) amount. The value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

- Discounted Cash Flow (DCF) Method: Under this method, either:
  - in projected from cash flows from business operations available to all providers of capital are discounted at the weighted average cost of capital to such capital providers, on a market participant fleats, and the sum of such discounted tree cash flows is the value of the business from which value of that and other capital is deducted, and other relevant adjustments made to errive at the value of the equity Free Cash Flows to Firm (FCFF) technique; This discount rate, which is applied to the free cash flows, should reflect the apportunity cost to all the capital providers (namely shareholders and creditors), weighted by their relative contribution to the total capital of the company. The apportunity cost to the capital provider equals the rate of nature the capital provider expects to earn on other investments of equivalent risk; or
  - o the projected free cosh flows from business operations available to equity shureholders fatter deducting cash flows attributable to the debt and other capital providers) are discounted at the cost of equity, on a market participant basis, and the sum of such discounted free dash flows, after making other relevant adjustments, is the value of the equity. Free Cash Flows to Equity (FCFE) technique. This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to the equity capital provider equals the rate of return such actury capital provider expects to cath on other investments of equivalent tick.

Market Approach: Market approach is a valuation approach that uses prices and other relevant information generated by market translactions involving identical or comparable (i.e., similar) assum, liabilities or a group of assets and liabilities, such as a business.

• Market Price Method: Under this matriord, the value of shares of a company is determined by taking the everage of the market capitalisation of the equity shares of such company as quoted on a necognised monk exchange over responsible periods of time where auch quotations are assing from the shares being regularly and freely traded in an active market, subject to the element of speculative support that may be inbuilt in the market price. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share, especially where the market values are fluctuating in a volotic capital market. Further, in the case of an amalgamentor, where there is a question of evaluating the shares of one company against those of another, the volume of transactions and the number of shares available for trading on the stock exchange over a reasonable period Wood have to he of a comparable standard. This method would also cover any other transactions in the shares of the company including or mary/ preferential issues open offer in the shares of the company including or mary/ preferential issues open offer in the shares of the company available in the public domain.

- Comparable Companies Multiples (CCM) Method: Under this method, one alternative measure the value of the shared business of company by applying the derived marter multiple based on marker quantations of companies for each companies, in an active market, possessing attributes similar to the tuniness of such company to the relevant financial parameter of the company/ business (based on pact and/ or projected working results) after resking adjustments to the derived multiples on occount of dissimilarities with the comparable companies and the strangths, weaknesses and other factors possible to the company being valued. These valuations are based on the principle that such market valuations, taking place between informed ouyers and informed softers, incurporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.
- Comparable Transactions Multiples (CTM) Method: Under this method, one attempts to
  measure the value of the sharest business of company by applying the market multiples of
  publicly disclosed transactions in similar space as the respective companies being evaluated.
  Relevant multiples need to be chosen carefully and adjusted for differences, between the
  circumstances.

Out of the above methods, we have used approaches/ methods as considered appropriate. The valuation approaches/ methods used, and the values arrived at using such approaches/ methods by us have been tabled in the next section of this Report.

#### BASIS OF EQUITY SHARE EXCHANGE RATIO

The basis of the Proposed Ameigametian would fight to be determined after taking into consideration all the factors, approaches and methods considered appropriate by the Valuers. Though different values have been arrived at under such in the above approaches/ muthods; for this purposes of recommending the Equity Share Exchange Ratio II is necessary to arrive at a single value for the shares of the companies involved in an amaignment on such as the Proposed Amaignmenton. It is necessary important to note that in doing so, we are not attempting to arrive at the absolute values of the chares of the companies out at their relative values to facilitate the determination of an Equity Share Exchange Ratio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each approach method.

In the ultimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuer and judgments taking into account all the relevant factors. There will always be several factors, e.g. quality of the management, present and prospective compatition, yield on compatible securities and market sentiment, etc. which are not evident from the face of the palance sheet but which will strongly influence the worth of a share.

The determination of an exchange ratio is not a precise acience and the conclusions arrived at in many cases will, of recessity, be subjective and dependent on the excritice of individual judgment. This concept is also recognized in judicial escisions. There is, therefore, no indisputable simple exchange ratio. While we have provided our recommendation of the Equity Share Exchange Platic based on the information available to us and within the scope and constraints of our engagement, others may have a different opinion as to the Equity Share Exchange Ratio of the equity shares of FEL and the respective Part A Companies. The Enal responsibility for the determination of the exchange ratio at which the Proposed Amalgamasion shall take place will be with the Board of Directors of the respective Part A Companies who should take into account other feature such as their own assessment of the Proposed Amalgamation and input of other advisors.

For the present valuation analysis, we have considered it appropriate to apply the Income Approach and the Market Approach (Market Price and CCM), to acrive at the relative felt value of the equity shares of the companies for the purpose of the Proposed Amalgamation.

In the correct analysis, the amalgamation of the companies is proceeded with on the essumption that the companies would mercs as going concerns (subject to the implementation of the companies unhance of marger) and an actual material of the operating assets rain not contemplated. # 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly we have considered the IVS issued by International Valuation Standards Council ('IVSC') in carrying out the valuation exercise.
- 7.4. The Report Date is valuation date ('Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost" Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

Cost Approach

### **Summation Method**

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the

companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, therefore, the values arrived at on the net asset basis being of limited relevance.

#### Income Approach

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

#### **Discounted Cash Flow Method**

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected 'cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-à-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

#### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

#### i. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

#### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ('CCM') method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

## iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected

multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

# 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares has been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money as well as convertible instruments.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

# 9. Conclusion

- 9.1. We have used the combination of valuation Method as discussed above and arrived at the recommended fair equity share swap ratio which is as follows:
  - a) In the event of amalgamation of FCL into FEL:

Valuation	Valuation	FCL		FEL	
Approach	Method	Value Per Share (INR)	Weights	Value Per Share (INR)	Weights
Income Approach	DCF Method	12.9	33.3%	17.5	33.3%
Market Approach	MP Method	14.5	33.3%	11.3	33.3%
Market Approach	CCM Method	9.2	33.3%	13.3	33.3%
Cost Approach	NAV Method	NA	NA	NA	NA
Value Per Share		12.2		14.0	
Swap (Rounde		0.	.9	N	A

NA= Not Adopted/Not Applicable

- 9.2. Therefore, the following is the recommended Fair Equity Share Swap Ratio:
  - 9 equity shares of FEL (of INR 2/- each, fully paid up) for every 10 equity shares held in FCL (of INR 6/- each fully paid up) for the proposed amalgamation.

  - Information provided by leading database sources (proprietary databases subscribed by us or our network firm), market research reports and other published data (including the Stock Exchanges);
  - Draft Composite Scheme of Arrangement; and
  - Management Representation Letter addressed to BDO VAL.

#### 6. Procedures Adopted

- 6.1. In connection with this exercise, we have adopted the following procedures to carry out the valuation:
  - Requested and received financial information;
  - Obtained data available in public domain;
  - Undertook industry analysis such as researching publicly available market data including economic factors and industry trends that may impact the valuation;
  - Detailed analysis of Comparable Companies for each business;
  - Discussions (over call/emails/conferences) with the management to understand the business and fundamental factors that could affect its earning-generating capability including strengths, weaknesses, opportunity and threats analysis and historical financial performance;
  - Selection of valuation methodology/(ies) as per internationally accepted valuation methodologies;
  - Determined the fair equity share swap ratio based on the selected methodology.

For the purpose of arriving at the valuation of the Companies/businesses we have considered the valuation base as 'Fair Value' and the premise of value is 'Going Concern Value'. Any change in the valuation base, or the premise could have significant impact on our valuation exercise, and therefore, this report.

The Companies have been provided with the opportunity to review the draft Report (excluding the recommended equity share swap ratio) as part of our standard practice to make sure that factual inaccuracies/omissions are avoided in our final Report.

#### 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly we have considered the International Valuation Standards issued by International Valuation Standards Council ('IVSC') in carrying out the valuation exercise.
- 7.4. The Report Date is valuation date ('Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost" Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

Cost Approach

#### **Summation Method**

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the

companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, therefore, the values arrived at on the net asset basis being of limited relevance.

#### Income Approach

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

#### **Discounted Cash Flow Method**

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected 'cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-à-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

#### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

#### i. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

#### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ('CCM') method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

#### iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected

multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

#### 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares have been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

# 9. Conclusion

- 9.1. We have used the combination of valuation Method as discussed above and arrived at the recommended fair equity share swap ratio which is as follows:
  - a) In the event of amalgamation of FLFL into FEL:

Valuation	Valuation	FLFL		FEL	
Approach	Method	Value Per Share (INR)	Weights	Value Per Share (INR)	Weights
Income Approach	DCF Method	165.4	33.3%	17.5	33.3%
Market Approach	MP Method	147.0	33.3%	11.3	33.3%

### 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly we have considered the International Valuation Standards issued by International Valuation Standards Council ('IVSC') in carrying out the valuation exercise.
- 7.4. The Report Date is the valuation date ('Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost" Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

Cost Approach

#### **Summation Method**

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the

companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, therefore, the values arrived at on the net asset basis being of limited relevance.

#### Income Approach

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

#### **Discounted Cash Flow Method**

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected 'cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-à-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

#### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

#### i. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

#### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ('CCM') method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

#### iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected

multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

## 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares have been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

## 9. Conclusion

- 9.1. We have used the combination of valuation Method as discussed above and arrived at the recommended fair equity share swap ratio which is as follows:
  - a) In the event of amalgamation of FMNL into FEL:

Valuation	Valuation	FM	NL	Fl	EL
Approach	Method	Value Per Share (INR)	Weights	Value Per Share (INR)	Weights
Income Approach	DCF Method	28.6	33.3%	17.5	33.3%
Market Approach	MP Method	17.8	33.3%	11.3	33.3%
Market Approach	CCM Method	28.0	33.3%	13.3	33.3%
Cost Approach	NAV Method	NA	NA	NA	NA
Value Pe	r Share	24	.8	14	1.0
Swap   (Rounde		1.	.8	N	A

NA= Not Adopted/Not Applicable

## 9.2. Therefore, the following is the recommended Fair Equity Share Swap Ratio:

- 18 equity shares of FEL (of INR 2/- each, fully paid up) for every 10 equity shares held in FMNL (of INR 10/- each fully paid up) for the proposed amalgamation.

- 4.14.1. Valuation is not a precise science and the conclusions arrived at in many cases will be subjective and dependent on the exercise of individual judgment. There is therefore no indisputable single value. While we have provided an assessment of the value based on an analysis of information available to us and within the scope of our engagement, others may place a different value on this business.

- 4.15. This Report does not look into the business/commercial reasons behind the Proposed Arrangement nor the likely benefits arising out of the same. Similarly, it does not address the relative merits of the Proposed Arrangement as compared with any other alternative business transaction or any other alternatives, whether or not such alternatives could be achieved or are available.
- 4.16. We have no obligation to update this report.
- 4.20. Further, after declaration of Covid-19 as a pandemic by World Health Organization and consequent imposition of lockdown in India has caused a widespread disruption in businesses as well as on financial markets in India and globally alike. Our assumptions for the valuation is surrounded by these unprecedented uncertainty across all the industries and sectors including the time period over which these circumstances could prevail. The valuation assumptions, the underlying

- projections and the outcome of the valuation analysis could materially change as a result of the continued or increased uncertainty around the prevalence of Covid-19 circumstances and hence a reliance on our valuation must be placed considering these unprecedented circumstances.

  - Detailed business profile and information of current business operations of FEL and FRL & its subsidiaries and associates;
  - Provisional standalone financial statements (Pre IND-AS 116 impact) of FEL and FRL & its subsidiaries and associates for the financial year ('FY') ended March 31, 2020;
  - Projected standalone financial statements (Pre IND-AS 116 impact) of FEL and FRL for the period from April 01, 2020 till March 31, 2025.
  - Latest shareholding pattern as at Report date of FEL and FRL.

  - Information provided by leading database sources (proprietary databases subscribed by us or our network firm), market research reports and other published data (including the Stock Exchanges);
  - Draft Composite Scheme of Arrangement; and
  - Management Representation Letter addressed to BDO VAL.

## 6. Procedures Adopted

- 6.1. In connection with this exercise, we have adopted the following procedures to carry out the valuation:
  - Requested and received financial information;
  - Obtained data available in public domain;
  - Undertook industry analysis such as researching publicly available market data including economic factors and industry trends that may impact the valuation;
  - Detailed analysis of Comparable Companies for each business;
  - Discussions (over call/emails/conferences) with the management to understand the business and fundamental factors that could affect its earning-generating capability including strengths, weaknesses, opportunity and threats analysis and historical financial performance;
  - Selection of valuation methodology/(ies) as per internationally accepted valuation methodologies;
  - Determined the fair equity share swap ratio based on the selected methodology.

For the purpose of arriving at the valuation of the Companies/businesses we have considered the valuation base as 'Fair Value' and the premise of value is 'Going Concern Value'. Any change in the valuation base, or the premise could have significant impact on our valuation exercise, and therefore, this report.

The Companies have been provided with the opportunity to review the draft Report (excluding the recommended equity share swap ratio) as part of our standard practice to make sure that factual inaccuracies/omissions are avoided in our final Report.

## 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly We have considered the International Valuation Standards issued by International Valuation Standards Council ('IVS') in carrying out the valuation exercise.
- 7.4. The Report Date is valuation date ('Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost" Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

Cost Approach

### **Summation Method**

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the

companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, therefore, the values arrived at on the net asset basis being of limited relevance.

#### Income Approach

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

#### **Discounted Cash Flow Method**

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected 'cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-à-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

#### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

#### i. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

#### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ('CCM') method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

#### iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected

multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value so derived is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

## 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares have been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

## 9. Conclusion

- 9.1. We have used the combination of valuation Method as discussed above and arrived at the recommended fair equity share swap ratio which is as follows:
  - a) In the event of amalgamation of FRL into FEL:

Valuation	Valuation	FRL		FEL	
Approach	Method	Value Per Share (INR)	Weights	Value Per Share (INR)	Weights
Income Approach	DCF Method	141.3	33.3%	17.5	33.3%
Market Approach	MP Method	95.7	33.3%	11.3	33.3%
Market Approach	CCM Method	189.5	33.3%	13.3	33.3%
Cost Approach	NAV Method	NA	NA	NA	NA
Value Per Share		143	2.2	14	.0
Swap Ratio (Rounded Off)		10	).1	N	A

NA= Not Adopted/Not Applicable

- 9.2. Therefore, the following is the recommended Fair Equity Share Swap Ratio:
  - 101 equity shares of FEL (of INR 2/- each, fully paid up) for every 10 equity shares held in FRL (of INR 2/- each fully paid up) for the proposed amalgamation.

### 6. Procedures Adopted

- 6.1. In connection with this exercise, we have adopted the following procedures to carry out the valuation:
  - Requested and received financial information;
  - Obtained data available in public domain;
  - Undertook industry analysis such as researching publicly available market data including economic factors and industry trends that may impact the valuation;
  - Detailed analysis of Comparable Companies for each business;
  - Discussions (over call/emails/conferences) with the management to understand the business and fundamental factors that could affect its earning-generating capability including strengths, weaknesses, opportunity and threats analysis and historical financial performance;
  - Selection of valuation methodology/(ies) as per internationally accepted valuation methodologies;
  - Determined the fair equity share swap ratio based on the selected methodology.

For the purpose of arriving at the valuation of the Companies/businesses we have considered the valuation base as 'Fair Value' and the premise of value is 'Going Concern Value'. Any change in the valuation base, or the premise could have significant impact on our valuation exercise, and therefore, this report.

The Companies have been provided with the opportunity to review the draft Report (excluding the recommended equity share swap ratio) as part of our standard practice to make sure that factual inaccuracies/omissions are avoided in our final Report.

## 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly we have considered the International Valuation Standards issued by International Valuation Standards Council ('IVSC') in carrying out the valuation exercise.
- 7.4. The Report Date is valuation date ('Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost" Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

Cost Approach

#### **Summation Method**

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the

companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, therefore, the values arrived at on the net asset basis being of limited relevance.

#### Income Approach

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

#### **Discounted Cash Flow Method**

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected 'cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-à-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

#### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

#### i. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

#### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ('CCM') method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

#### iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected

multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value so derived is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

## 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares have been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

## 9. Conclusion

- 9.1. We have used the combination of valuation Method as discussed above and arrived at the recommended fair equity share swap ratio which is as follows:
  - a) In the event of amalgamation of FSCSL into FEL:

Valuation	Valuation	FSCSL		FEL	
Approach	Method	Value Per Share (INR)	Weights	Value Per Share (INR)	Weights
Income Approach	DCF Method	221.0	33.3%	17.5	33.3%
Market Approach	MP Method	135.7	33.3%	11.3	33.3%
Market Approach	CCM Method	193.3	33.3%	13.3	33.3%
Cost Approach	NAV Method	NA	NA	NA	NA
Value Per Share		183	3.3	14	.0
Swap Ratio (Rounded Off)		13	.1	N	A

NA= Not Adopted/Not Applicable

## 9.2. Therefore, the following is the recommended Fair Equity Share Swap Ratio:

- 131 equity shares of FEL (of INR 2/- each, fully paid up) for every 10 equity shares held in FSCSL (of INR 10/- each fully paid up) for the proposed amalgamation.

1. NAV Method under 'Cost Approach' has not been considered since the net asset value does not reflect the intrinsic value of the business in a "going concern scenario".

In the light of the above, and on consideration of all the relevant factors and circumstances as discussed and outlined in the Report and hereinabove, in our opinion fair equity share swap ratio for the proposed amalgamation of FSCSL into FEL is as follows (as per the Report):

## a) In the event of amalgamation of FSCSL into FEL:

### 7. Valuation Approaches

- 7.1. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of the companies, its businesses and assets.
- 7.2. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for transactions of a similar nature and our reasonable judgment, analysis of businesses, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.
- 7.3. It may be noted that BDO Valuation Advisory LLP is enrolled with IOV Registered Valuers Foundation, which has recommended to follow International Valuation Standards ("IVS") for undertaking valuation and accordingly we have considered the International Valuation Standards issued by International Valuation Standards Council ("IVSC") in carrying out the valuation exercise.
- 7.4. The Report Date is the valuation date (Valuation Date'). For valuation exercise, market parameters have been considered up to and including August 21, 2020.
- 7.5. There are three generally accepted approaches to valuation:
  - (a) "Cost Approach
  - (b) "Income" Approach
  - (c) "Market" Approach

Within these three basic approaches, several methods may be used to estimate the value. An overview of these approaches is as follows:

### Cost Approach

### Summation Method

The summation method, also referred to as the underlying asset method, is typically used for investment companies or other types of assets or entities for which value is primarily a factor of the values of their holdings.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amaigamation would normally be proceeded with, on the assumption that the companies amaigamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the income and Market approaches, is of greater importance to the basis of amaigamation, therefore, the values arrived at on the net asset basis being of limited relevance.

Income Approach

The Income approach is widely used for valuation under "Going Concern" basis. It focuses on the Income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

### Discounted Cash Flow Method

Under the Discounted Cash Flow ('DCF') method, the value of the undertaking is based on expected cash flows for future, discounted at a rate, which reflects the expected returns and the risks associated with the cash flows as against its accounting profits. The value of the undertaking is determined as the present value of its future free cash flows.

Free cash flows are discounted for the explicit forecast period and the perpetuity value thereafter. Free cash flows represent the cash available for distribution to both, the owners and creditors of the business.

Discount rate is the Weighted Average Cost of Capital ('WACC'), based on an optimal vis-a-vis actual capital structure. It is appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk and also debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business's potential for further growth beyond the explicit forecast period. The "constant growth model" is applied, which implies an expected constant level of growth (for perpetuity) in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business's future operations.

The Business/Enterprise Value so derived, is further reduced by value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of business. The surplus assets / non-operating assets are also adjusted.

In case of free cash flows to equity, the cash available for distribution to owners of the business is discounted at the Cost of Equity and the value so arrived is the Equity Value before surplus/ non-

operating assets. The surplus assets / non-operating assets are further added to arrive at the Equity Value.

The future earning capability of the business is important, and the management of these companies have provided the future financial projections. Therefore, we have considered DCF Method under Income Approach.

### Market Approach

Under the Market approach, the valuation is based on the market value of the company in case of listed companies and comparable companies trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors perception about the true worth of the company.

### 1. Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading. The market value reflects the investors' perception about the true worth of the company.

### ii. Comparable Companies Multiple Method

Under the Comparable Companies Multiple ("CCM") method, the value is determined on the basis of multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

To the value of the business so arrived, adjustments need to be made for the value of contingent assets/liabilities, surplus Asset and dues payable to preference shareholders, if any, in order to arrive at the value for equity shareholders.

### iii. Comparable Transactions Multiple Method

Under the Comparable Transactions Multiple ('CTM') method, the value of a company can be estimated by analyzing the prices paid by purchasers of similar companies under similar circumstances. This is a valuation method where one will be comparing recent market transactions in order to gauge current valuation of target company. Relevant multiples have to be chosen carefully and adjusted for differences between the circumstances. This valuation approach is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation.

Under Market Approach, we have considered CCM Method and MP Method. We have identified listed comparable companies based on business of each company and thereafter screen selected multiple based on business composition, business description, etc. We have considered Sales multiple of the comparable listed companies. The total equity value so derived is than divided by total number of equity shares for arriving at the value per equity share of companies under CCM Method.

7.6. The shares of all Companies are listed on BSE and NSE and there are regular transactions in their equity shares with reasonable volumes. We have considered to the Securities and Exchange Board of India (Insue of Capital and Disclosure Requirements) Regulation 2018 as amended from time to time ('ICDR Regulations') for MP Method. Based on our analysis of public domain information about these Companies, we have observed that information related to proposed transaction with these Companies is available in public domain from 10<sup>th</sup> June 2020 and share price of these companies are affected due to influence of this information. Therefore, 10<sup>th</sup> June 2020 has been considered as relevant date as per ICDR Regulations.

### 8. Basis of Fair Equity Share Swap Ratio

- 8.1. The basis of the fair equity share swap ratio for the Proposed Amalgamation would have to be determined after taking into consideration all the factors and methods mentioned hereinabove and to arrive at a final value for the shares of each company. We have considered consistent methods and weights for all these Companies to facilitate the determination of the fair equity share swap ratio.
- 8.2. We have considered it appropriate to assign equal weights to the value arrived in all the three methods.
- 8.3. The shares have been considered on fully diluted basis by giving effect to the outstanding ESOPs which are in the money as well as convertible instruments wherever issued in the companies.
- 8.4. To arrive at the consensus on the fair equity share swap ratio for the Proposed Amalgamation, suitable minor adjustment/rounding off have been done in the values arrived.

Sub: Certificate for Preferential Allotment Price calculated in accordance with para164 (1) -Pricing of frequently traded shares and para 166 - Adjustments in Pricing of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations, 2018.

- 1. We understand that the management of the Future Enterprises Limited ("FEL" or "the Client" or "the Company"), Future Consumer Limited ("FCL"), Future Lifestyle Fashions Limited ("FLFL"), Future Retail Limited ("FRL"), Future Supply Chain Solutions Limited ("FSCSL"), Future Market Networks Limited ("FMNL") along with other identified companies together hereinafter referred to as "the Companies" are proposing to enter into a composite scheme of arrangement, which provides the following ("Proposed Transaction"):
  - a) amalgamation of the FCL, FLFL, FRL, FSCL and FMNL (together referred to as "Transferor Companies") with FEL (Step I);
  - b) transfer and vesting of the Logistics & Warehousing Undertaking from Merged FEL to Reliance Retail Ventures Limited ("RRVL") on a Slump Sale basis (Step II-a);
  - c) transfer and vesting of the Retail & Wholesale Undertaking from Merged FEL to wholly owned subsidiary of RRVL (RRVL WOS) on a Slump Sale basis (Step II-b); and
  - d) Preferential Allotment of Preferential Equity Shares and Preferential Warrants to RRVL WOS (Step III).
- 2. Since the Company is proposing to enter into a composite scheme of arrangement ("the Scheme"), management of the Company has appointed us to calculate preferential issue price of FEL equity shares, to be allotted as per Step III above, after taking into considerations the provisions of para 164(1) and para 166 (g) of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations, 2018, and after giving effect, if any of, Step I, Step II-a and Step II-b of the Scheme ('Purpose').

3. As per para 164 (1) of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations, 2018,

If the equity shares of the issuer have been listed on a recognized stock exchange for a period of twenty six weeks or more as on the relevant date, the price of the equity shares to be allotted pursuant to the preferential issue shall be not less than higher of the following:

- a. the average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognized stock exchange during the twenty-six weeks preceding the relevant date; or
- b. the average of the weekly high and low of the volume weighted average prices of the related equity shares quoted on a recognized stock exchange during the two weeks preceding the relevant date.

Further, as per SEBI amendment Circular No. SEBI/LAD-NRO/GN/2020/21, para 164 (B) is inserted, which provides an option to consider the following pricing formula for the preferential issue during the period from July 01, 2020 to December 31, 2020

- a. The price of the equity shares to be allotted pursuant to the preferential issue shall not be less than the higher of the following:
  - (a) the average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognized stock exchange during the twelve weeks preceding the relevant date; or

As per SEBI Circular No. CFD/DIL3/CIR/2017/21, dated March 10, 2017, read along with SEBI Circular No. CFD/DIL3/CIR/2017/26, dated March 23, 2017 the 'relevant date' for the purpose of computing pricing shall be the date of Board meeting in which the scheme is approved.

As per para 166 of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations, 2018, the price determined for a preferential issue in accordance with regulation 164 or regulation 165, shall be subject to appropriate adjustments, if the issuer:

- a) makes an issue of equity shares by way of capitalization of profits or reserves, other than by way of a dividend on shares;
- b) makes an issue of equity shares after completion of a demerger wherein the securities of the resultant demerged entity are listed on a stock exchange;

<sup>\*</sup>NA- Not Applicable

The Equity shares are listed on National Stock Exchange ("NSE") and Bombay Stock Exchange ("BSE"). We have considered prices of NSE as the trading volume on NSE is higher.

- 5. We have analyzed the impact of Step I, Step II-a and Step II-b of the Scheme, on the price arrived as para 164(1) and para 164(B) of Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018 as below:
- a. Impact of Amalgamation: we understand that the merger swap ratio will be at relative fair value of all the Companies, wherein the valuers have adopted consistent methodology and weights for arriving the equity price of each company, on the basis of which the share swap ratio is arrived. Therefore, the amalgamation of all Companies into FEL will not require any adjustment to the FEL price arrived as per para 164(1) and para 164(B) of Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018.
- b. Impact of Slump Sale: The para 166 of Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018, Adjustments in pricing does not refer to adjustment for slump sale transaction. Also, we understand that slump sale of business is at fair value between a willing buyer and a willing seller on arm's length basis. Therefore, the slump sale of business under step II, will not require any adjustment to the FEL price arrived as per para 164(1) and para 164(B) of Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018
- 6. We understand that, there is no change in the business of FEL apart from what has been considered in the Scheme.

7. Based on the above, the preferential issue price of 1 equity share of INR 2/-fully paid-up of FEL calculated as per para 164(1) of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018, and considering Nil adjustment for Step I, Step II-a and Step II-b of the Scheme as evaluated under para 166 of the Securities Exchange Board of India (Issue of Capital and Disclosure Requirements), 2018, is INR 17.63/-.

SEBI on August 8, 2014, passed an adjudication order on a show cause notice ("SCN") issued to RIL for alleged non-disclosure of the diluted earnings per share in the quarterly financial results for the quarters ended June, 2007, September, 2007, December, 2007, March, 2008, June, 2008 and September, 2008 (together, the "Quarterly Financial Results") and imposed a penalty of Rs. 13 crore. On an appeal by RIL, the Securities Appellate Tribunal set aside SEBI's order and remanded the matter for fresh consideration by SEBI. SEBI issued a fresh SCN dated April 5, 2016 in the matter, alleging incorrect disclosure of the diluted earnings per share. RIL filed a reply to the SCN and attended the personal hearing and filed written submission before the adjudicating officer ("AO"). The last hearing before the AO was held on November 22, 2018. Further details sought by the AO were provided in December 2018. After more than 2 years, the AO sent a letter dated March 19, 2021 granting an opportunity to the Company to make additional submissions and personal hearing in the matter. RIL filed additional submissions in the matter. Vide his order dated September 20, 2021. The AO, vide his order dated September 20, 2021, has disposed off the SCN dated April 5, 2016 without any levy of penalty.
  - 2(i) On December 16, 2010, SEBI issued a show cause notice ("SCN") to RIL and 12 other entities (together, the "Noticees") in connection with the trades by RIL in the stock exchanges in 2007 in the shares of Reliance Petroleum Limited, then a subsidiary of RIL. Hearings were held before the Whole Time Member ("WTM") of SEBI in respect of SCN. By an order dated March 24, 2017, the WTM of SEBI held that the actions of RIL and other 12 noticees constituted a violation of the provisions of section 12A of Securities and Exchange Board of India Act, 1992 read with regulations 3, 4(1) and 4(2)(e) of the SEBI (Prohibition of Fraudulent and Unfair Trade Practices relating to Securities Market) Regulations, 2003 and the other 12 noticees violated provisions of the SEBI circular No. SMDRP/DC/CIR-10/01 dated November 2, 2001 and NSE circular No. NSE/CMPT/2982 dated November 7, 2001. WTM passed the directions: (i) prohibiting the Noticees from dealing in equity derivatives in the 'Futures & Options' segment of stock exchanges, directly or indirectly, for a period of one year from the date of the order; and (ii) to RIL to disgorge an amount of Rs. 447.27 crore along with interest at the rate of 12% per annum from November 29, 2007 till the date of payment. In May 2017, RIL and the other notices filed an appeal before the Securities Appellate Tribunal ("SAT") against this order. SAT, by a majority order (2:1), dismissed the appeal on November 5, 2020 and directed RIL to pay the disgorged amount within sixty days from the date of the order. The appeal of RIL and other noticees has been admitted by the Hon'ble Supreme Court of India. By its order dated December 17, 2020, the Hon'ble Supreme Court of India has directed RIL to deposit Rs. 250 crore in the Investors' Protection Fund, subject

- to the final result of the appeal and has stayed the recovery of the balance, inclusive of interest, pending the appeal. RIL has complied with the order dated December 17, 2020 of the Hon'ble Supreme Court of India.

The Adjudicating Officer of SEBI passed an order on January 1, 2021 imposing a penalty of Rs. 25 crore on RIL. RIL has filed an appeal before the SAT against this order.
- 3. - **D.** Brief details of outstanding criminal proceedings against RIL:

### I. Proceedings initiated by regulatory, statutory and governmental authorities:

1. The Central Bureau of Investigation, Economic Offences Wing, Mumbai ("CBI") registered a FIR against RIL and officers of National Insurance Company Limited ("NICL"), upon taking cognizance of a complaint dated November 11, 2005 ("Original Complaint") filed by Shri P.R. Verma, the then Assistant Manager and Vigilance Officer, NICL with CBI. The Original Complaint alleged that from 2002 to 2005, RIL had allegedly made wrongful pecuniary gains in relation to certain insurance policies, to the detriment of National Insurance Company Limited. Based on the FIR, the Additional Sessions Judge, City Civil and Sessions Court, Mumbai, passed an order issuing process in the Original Complaint. RIL has filed a criminal application before the Court of Special Judge for Greater Mumbai ("Special Judge"), inter alia, seeking discharge from the proceedings in the Original Complaint, on the grounds that no specific case had been made out against RIL. The matter is currently pending.

Simultaneously, RIL has also filed a criminal application before the Bombay HC challenging continuation of the proceedings before the Special Judge, alleging that the appointment of the Special Judge was violative of the Prevention of Corruption Act, 1988. The Bombay HC has, from time to time, granted ad-interim relief and stayed the proceeding before the Special Judge. The matter is currently pending.

2. The Serious Fraud Investigation Office, Ministry of Corporate Affairs, Government of India ("SFIO") had filed a complaint with the Additional Chief Metropolitan Magistrate, Special Acts, Tis Hazari Court ("Metropolitan Magistrate") against certain persons and entities for alleged violations of provisions of the Companies Act, 1956 and alleged commission of offences under Sections 120-B, 403, 420 and 477A of the IPC. The Metropolitan Magistrate took cognizance of the complaint, alleging that RIL was a beneficiary of certain allegedly fictitious/irregular 'accommodation entries' made by the accused, and issued summons to RIL. The matter is currently pending.

- 3. A complaint was filed against RIL and others before the Economic Offences Wing, Delhi ("EoW") and a criminal case was filed thereafter, before the Chief Metropolitan Magistrate, South east, District Court, Saket ("CMM"), alleging non-payment of dues for work orders carried out by the complainant for Reliance Jio Infocomm Limited. On February 16, 2019, the CMM passed an order ("CMM Order") directing the EoW to lodge a FIR against RIL and others. On February 18, 2019, a FIR was lodged by the EoW under Sections 406, 420 and 120-B of the IPC. RIL filed petitions before the High Court of Delhi ("Delhi HC") seeking quashing of the FIR and all consequent proceedings emanating therefrom. On March 27, 2019, the Delhi HC passed orders staying the proceedings pursuant to the CMM Order till the next date of hearing. The matter is currently pending.
- 4. In 2014, four individuals filed a complaint with the Chief Minister of the Government of National Capital Territory of Delhi ("Delhi Government") alleging collusion between the then Ministers of the Central Government of India ("Central Government") and RIL in relation to increasing the price of gas produced by RIL from the KG-D6 block. The then Chief Minister of Delhi had ordered the Anti-Corruption Bureau, Delhi Government ("ACB") to register the FIR and investigate the matter.

RIL filed a writ petition before the Delhi HC questioning the jurisdiction of the ACB in registering the FIR against RIL. The matter is currently pending before the Delhi HC.

#### II. Proceedings initiated by others

- 1. A shareholder ("Complainant") filed a complaint ("Complaint") inter alia against RIL before the Metropolitan Magistrate, 23rd Court at Esplanade, Mumbai ("Magistrate Court"), for alleged delay in furnishing certain information and registers required to be maintained under the Companies Act, 1956. In response to the orders of the Magistrate Court, issuing process and summons pursuant to the Complaint ("Magistrate Court Orders"), RIL filed an application before the High Court of Bombay ("Bombay HC") challenging the Magistrate Court Orders, on the grounds that the information/ documents sought by the Complainant had already been provided to him and accordingly, no violation of the applicable provisions of the Companies Act, 1956, could be made out against RIL and others. The Bombay HC, by way of its order dated July 9 2015, stayed the proceedings before the Magistrate Court with interim relief being extended from time to time. The matter is currently pending.
- 2. A complaint was filed inter alia against RIL before the Special Judicial 1st Class Magistrate for Prohibition and Excise, Kakinada ("Special Magistrate"), alleging purchase and sale of the complainant's land, despite knowledge of the complainant's rights to the said land and pending litigation of the complainant with respect to the said property. The Special Magistrate dismissed the complaint against RIL, which dismissal has been challenged by the complainant by filing a quashing application with the High Court of Hyderabad. The matter is currently pending.
- 3. A complaint ("Complaint") was filed inter alia against RIL before the Metropolitan Magistrate, 4th Court at Girgaon ("Magistrate Court") under Sections 420, 463, 467, 499 and 500 of the Indian Penal Code, 1860 ("IPC") on July 23, 2004, alleging wrongful billing and criminal intimidation of the complainant. A process order was issued in the Complaint on August 19, 2004. On October 16, 2004, a criminal writ petition was filed by RIL before the Bombay HC, seeking to quash the complaint and the order of the Magistrate Court issuing process. The Bombay HC, by way of its order dated March 16, 2006, stayed the proceeding at the Magistrate Court. The matter is currently pending.

To. Board of Directors of Future Retail Limited

Report on the sudit of the Standalone Financial Results

#### Opinion

- We have reviewed the accompanying statement of unaudited standarder financial results of Future Retail Limited (the "Company") for the querter ended June 30, 2021 (the "Statement") attached herewith, being submitted by the Company pursuant to the requirements of Regulation 33 of the SEBI (Listing Obligations and Discipsure Requirements) Regulations, 2015, as amended (the "Listing Regulations").
- 2. This Statement, which is the responsibility of the Company's Management and approved by the Company's Board of Directors, has been prepared in accordance with the recognition and measurement principles laid down in Indian Accounting Standard 34, (Ind AS 34) "Interim Financial Reporting" prescribed under Section 135 of the Companies Act, 2013 as amended, read with relevant rules issued thereunder and other accounting principles generally accepted in India, Our responsibility is to express a conclusion on the Statement based on our review.
- 3. We conducted our review of the Statement in accordance with the Standard on Review Engagements (SRE) 2410, "Review of Interim Financial Information Performed by the independent Auditor of the Entity" issued by the Institute of Chartered Accountants of India. This standard requires that we plan and perform the review to obtain moderate assurance as to whether the Statement is free of material misstatement. A review of Interim Financial information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Based on our review conducted as above, nothing has come to our attention that causes us to believe that the accompanying Statement, prepared in accordance with the recognition and measurement principles laid down in the aforesaid Indian Accounting Standards ('Ind AS') specified under Section 133 of the Companies Act, 2013 as amended, read with relevant rules issued thereunder and other accounting principles generally accepted in India, has not disclosed the information required to be disclosed in terms of the Listing Regulations, including the manner in which it is to be disclosed, or that it contains any material misstatement.

#### 5. Emphasis of Matter

We draw attention to Note 2 of the Statement which describes management's assessment of the impact of the COVID-19 pandemic on the Company's operations and carrying value of assets as at June 30, 2021. Our opinion is not modified in respect of this matter.

The hearing for both the application was concluded on July 16, 2021 and verdict of the Tribunal is awaited on the said applications.

Additionally, on August 06, 2021 FRL has also filed its Statement of Defence in response to the contentions raised by Amazon in its Statement of Claim.

Independent Auditor's Review Report on the Quarterly Unaudited Standalone Financial Results of the Company pursuant to the Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended.

Review Report to The Board Of Directors Future Enterprises Limited

- We have reviewed the accompanying Statement of unaudited Standalone Financial Results of FUTURE ENTERPRISES LIMITED ("the Company") for the quarter ended June 30, 2021 ("the Statement") attached herewith, being submitted by the Company pursuant to the requirements of Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended (the "Listing Regulation").
- 2. This statement, which is the responsibility of the Company's Management and approved by the Company's Board of Directors, has been prepared in accordance with the recognition and measurement principles laid down in Indian Accounting Standard 34, ("Ind AS 34") "Interim Financial Reporting" prescribed under Section 133 of the Companies Act, 2013, as amended, read with relevant rules issued thereunder and other accounting principles generally accepted in India. Our responsibility is to express a conclusion on the Statement based on our review.
- 3. We conducted our review of the Statement in accordance with the Standard on Review Engagements (SRE) 2410, "Review of Interim Financial Information Performed by the Independent Auditor of the Entity" issued by the Institute of Chartered Accountants of India. This standard requires that we plan and perform the review to obtain moderate assurance as to whether the Statement is free of material misstatement. A review of interim financial information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. We have not performed an audit and accordingly, we do not express an audit opinion.
- 4. Based on our review conducted as above, nothing has come to our attention that causes us to believe that the accompanying Statement, prepared in accordance with the recognition and measurement principles laid down in the applicable indian Accounting Standards ("Ind AS") specified under Section 133 of the Companies Act, 2013 as amended, read with relevant rules issued thereunder and other accounting principles generally accepted in India, has not disclosed the information required to be disclosed in terms of the Listing Regulations, including the manner in which it is to be disclosed, or that it contains any material misstatement.

#### 5. Emphasis of Matter

- a. We draw attention to note no. 2 of the statement which describes management's assessment of the impact of the COVID-19 pandemic on the operations and financial results of the Company.
- We draw attention to note no. 7 of the statement in respect of no separate segment reporting in the financial results of the Company.
- c. The company holds investment in following companies:
  - Future E-Commerce Infrastructure Limited being Rs. 17.72 crores as equity shares, Rs. 48.65 crores as non-cumulative compulsory convertible preference shares (series-2) and Rs. 0.11 Cr in non-cumulative compulsory convertible preference shares (series-1).
  - Futurebazaar India Limited being Rs. 19.16 crores in equity shares.
  - Ritvika Trading Private Limited being Rs. 0.01 crore in equity shares.
  - Bluerock eservices Private Limited being Rs. 10.92 crores in equity shares.
  - Future Merchandising and Sourcing Pte. Limited being Rs. 0.20 crore in equity shares.

In respect of above mentioned companies, the management has not provided provision for diminution in value of the long term investments totalling to Rs. 96.77 crores (Book Value) as in the opinion of the management such diminution is temporary in nature considering the intrinsic value of the assets, future prospects and claims (impact unascertainable). Our opinion is not modified in respect of this matter.

Our conclusion is not modified in respect of these matters.

## INDEPENDENT AUDITOR'S REVIEW REPORT ON REVIEW OF INTERIM STANDALONE FINANCIAL RESULTS

To The Board of Directors of Reliance Retail Ventures Limited

#### **Introduction**

- We have reviewed the accompanying statement of "Unaudited Standalone Financial Results for the quarter ended 30 June 2021" ("the Statement") of Reliance Retail Ventures Limited ("the Company").
- 2. This Statement, which is the responsibility of the Company's Management and approved by the Company's Board of Directors, has been prepared in accordance with the recognition and measurement principles laid down in the Indian Accounting Standard 34 "Interim Financial Reporting" ("Ind AS 34") prescribed under Section 133 of the Companies Act, 2013 read with relevant rules issued thereunder and other accounting principles generally accepted in India. This Statement has been prepared solely for submission to Reliance Industries Limited ("the Ultimate Parent Company") for the preparation of its consolidated financial results in terms of Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended. Our responsibility is to express a conclusion on the Statement based on our review.

#### **Scope of Review**

3. We conducted our review of the Statement in accordance with the Standard on Review Engagements (SRE) 2410, 'Review of Interim Financial Information Performed by the Independent Auditor of the Entity', issued by the Institute of Chartered Accountants of India ("ICAI"). A review of interim financial information consists of making inquiries, primarily of the Company's personnel responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Standards on Auditing specified under section 143(10) of the Companies Act, 2013 and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

#### **Conclusion**

4. Based on our review conducted as stated in paragraph 3 above, nothing has come to our attention that causes us to believe that the accompanying Statement, prepared in accordance with the recognition and measurement principles laid down in the aforesaid Indian Accounting Standards and other accounting principles generally accepted in India, has not disclosed the information required to be disclosed in terms of Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, as amended, to the extent applicable to the Company, including the manner in which it is to be disclosed to enable the Ultimate Parent Company to prepare its consolidated financial results, or that it contains any material misstatement.

#### Deloitte Haskins & Sells LLP

#### Other Matter

5. The comparative unaudited standalone financial results of the Company for the quarter ended 30 June 2020 prepared in accordance with Ind AS included in this Statement has been reviewed by the predecessor auditor whose report dated 30 July 2020 expressed an unmodified conclusion on those unaudited standalone financial results. Our conclusion on the Statement is not modified in respect of this matter.

#### **Restriction on Use**

For the reasons mentioned in paragraph 2 above, the Statement is not suitable for any other purpose.
